Professional Development

Powerful Professional Development:
Collaborative Learning, Part III
(2 hours Professional Development Credit)

Powerful professional development arises from and returns to the world of teaching and learning. Qualities of powerful professional learning arise from real work going on in the classrooms or schools; focus on what is happening with learners, both student and adult, in the classroom, school, and district; and are generally collaborative. During this workshop, participants explore methods and models of professional development that establish a culture of quality; honor staff's professionalism, expertise, and skills; and promote inquiry and reflection.

Part III: Facilitating Professional Learning Teams

This session focuses on the stages of team development, as well as team facilitation techniques. Further, we will create action plans for the newly formed professional learning teams.
